OPERATING CONDITIONS OF A RADIATION SUPERHEATER PLACED ALONG THE WHOLE HEIGHT OF THE FURNACE (Usloviya Raboty Radiatsionnogo Peregrevatelya Raspolozhennogo po Vsey Vysote Topki). Dec 60 [13p]. RTS 1492. Order from LC or SLA m1\$2.40, ph\$3.30 61-15236

Trans. of Teploenergetika (USSR) 1959, v. 6, no. 7, p. 41-45.

A radiation superheater placed along the whole height of the furnace and made of low alloy steel type 12KhMF can work in complete safety in boilers at $p = 100$ atm, when maintaining the "weight velocity" of the steam in the tubes at 700 to 1000 $\text{kg/m}^2 \cdot \text{sec}$, and with a steam temperature beyond the radiation superheater of 400°C. Calculations show that under the same conditions a wall-type radiation superheater can work at $p = 140$ atm as well. The "weight velocity" of the steam weight in the tubes during the initial period (Engineering--Mechanical, TT, v. 5, no. 6) (over)

USE OF ISMELIN IN VARIOUS FORMS OF HY-
PERTENSION. [1963] 13p. 6 refs. FASEB manuscript
no. S 304-2.

Order from OTS or SLA \$1.60 63-23021

Trans. of Terapevticheskii Arkhiv (USSR) 1962, v. 34,
no. 8, p. 109-113.

DESCRIPTORS: *Guanethidine, *Hypertension, Drugs,
Vasodilative agents.

Ismelin guanethidine is a highly effective hypotensive
agent, producing a good therapeutic effect in essential
and renal hypertension. An improvement sets in
even in cases where other agents have proved inef-
fective. Treatment should be started with small doses
(10-20 mg per day), and in the absence of positive re-
(Biological Sciences-Pharmacology, TT, v. 10, no. 6)
